Controlled LED Motorcycle Kit - NEW Chasing
function for 2020 Install Guide**

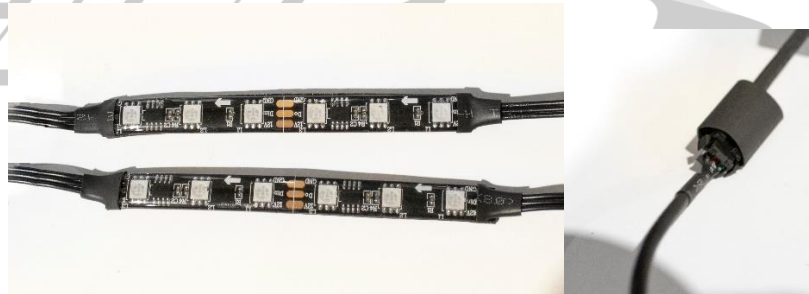

Kit Includes

- 12 Inch (1 foot) QTY 14
 - Y-Splitters QTY 2
 - 48 Inch (4 Feet) QTY 2
 - 4 Inch LED Strips QTY 2
- Control Module with Power and Ground Leads

Step 1- Inspect kit to ensure all contents are included and the kit is fully functional. *****Quick Tip at this point it would be great time to scan the QR code located on the module to download on your device.**

Step 2- Decide where to locate the light strips and ensure wiring has enough length for the control box to be installed in desired location. **MAKE SURE WHEN PLANNING OUT LED LOCATION THE ARROW ON THE LED ARE ALL POINTING IN THE SAME DIRECTION OTHERWISE THE CHASING FUNCTION WILL MALFUNCTION SEE PICTURE BELOW.** You may not have to use all supplied extensions it all depends on application and vehicle. Use shrink wrap to cover each plug being used to help with the exterior elements.

Step 3- Secure control box in desired location, run power and ground to battery or desired power supply. We do recommend using a switch to operate the LEDs. *****The control box is NOT waterproof, tuck away from the elements*****

Step 4- Clean all locations were the strips will be mounted with the rubbing alcohol and mount the LED strips with double sided tape and zip-ties. Make sure all wiring is clear and away from all moving components.
